SERVICES

A medical association delivered a fully multilingual 3-day event with Globibo's remote simultaneous interpretation and AI audio solutions, supporting 60 participants in English-Korean and English-Japanese.

SETUP & EQUIPMENT

- AI Simultaneous Interpretation with soft receivers
- Medical-specialized interpreting Model
- Events.Studio AI audio generation
- Speaker Diarization
- Language Detection
- Speaker Tagging
- On-site technical support with dedicated account and project management

Hybrid medical program powered by Remote Interpretation and AI Audio support

A prestigious medical association conducted a 3-day hybrid medical program in Singapore in December 2025. To support its international audience, the client required accurate multilingual communication across English, Korean, and Japanese. Globibo delivered AI Simultaneous Interpretation (RSI) using soft receivers.

Given the technical nature of medical discussions, the client relied on a highly customized medical model to maintain clarity across spoken content. The platform's medical-focused model enabled participants to receive consistent transcripts and AI-driven audio interpretation, allowing them to follow complex terminology without difficulty. Real-time communication played an essential role in keeping the sessions progressing smoothly.

The client received full preparation support for its medical program, including on-site engineering support and significant AI-engineering/training.

Globibo managed the technical setup for the on-site equipment, ensuring medical association sessions were organized and ready to deliver.

Globibo provides Event Technology Solutions for small and large-scale interpreting events.

Events.Studio is the only integrated software platform for hardware and software-based language interpretation.
